

NVU52DCM

52" 1080P Deep Black LCD Monitor

The NuVision 52-inch LucidiumDCM Series LCD is true home theater entertainment on a grand scale. Its elegant, sleek design with integrated low profile bottom speaker is a visual masterpiece. With a mounting depth under five inches, it's a perfect fit that looks great wherever you put it in your home. Features like 1080p, NiDO (NuVision Intelligent Digital Optimization), DSDB (Digital Switching Deep Black), DCS (Deep Color Spectrum), and NuColor xv color make this TV compatible with the latest video source components emerging on the market.

Sleek Design

How a product fits your lifestyle is important and the NuVision goal is to create a modern design that fits your home. The thin profile lets you place it easily in any room on its optional stand or custom mounted on a wall or inside a cabinet. The clean unobtrusive gloss front bezel is complimented by the velvet touch, rubberized paint used on the cabinet back and the body of the remote control. Its sleek design looks great even when it's turned off.

NiDO III Scaling / 10-bit Image Processing

The true test of any display is its ability to up-convert SD (Standard definition) material to the full HD resolution of the display. The NuVision Intelligent Digital Optimization algorithm skillfully up-converts standard definition content to the full HD resolution, bringing the TV picture to life regardless of its original resolution. NiDO incorporates a comprehensive image processing system that creates a film-like home theater experience from any video source: film, DVD, SD or HD content. A NiDO optimized picture ensures crisp, clean images and natural smooth motion that is virtually free from artifacts.

NuVision Remote

The NuVision Remote's body is carefully sculpted and is painted with a velvet touch rubberized paint that's easy to hold on to. The ergonomic design allows for simple operation with discrete buttons for input and aspect ratio selection. This allows ease of use without the need to access on screen menus to change inputs or perform key TV functions.

Functionality

A NuVision Monitor is more than just a TV. It's also a computer monitor, a security screen and an entertainment center. You can watch TV and a baby monitor on the same screen. You can plug in your laptop for the biggest spreadsheet or video game you've ever seen. The addition of 2 HDMI 1.3 inputs means your NuVision set is compatible with the latest HD video components and game systems.

DSDB / Digital Switching Deep Black

NuVision DSDB technology produces incredible contrast and brightness combined with an excellent ability to produce subtle shades of grey which result in an accurate, realistic looking picture in day or night conditions. Scenes hold black levels while maintaining vibrant, accurate colors. Ultra fast response time means that fast motion scenes look smooth and natural. The DSDB system further extends the black levels according to the signal source being displayed.

NuVision Warranty and Customer Support

This NuVision TV is backed by a 2 year warranty which covers parts, labor and the LCD. To ensure consumers receive the best support with the best home set-up and installation options, NuVision products are sold and warranted only through a network of NuVision authorized specialty retailers.
